Rowan McDaid

Amsterdam, Netherlands

rowan.mcdaids@gmail.com github.com/slimjim46 linkedin.com/in/rowan-mcdaid

Education

Vrije Universiteit *Sep 2025 – Expected Jul 2028*

BSc Computer Science (2nd year) Amsterdam, Netherlands

- Relevant modules: Algorithms & Data Structures, Object-Oriented and Functional Programming (in progress), Computer Networks, Systems Programming Project, Requirements Engineering

Projects

DoodleScrap (realtime drawing platform) — **GitHub** | **Live site** Oct 2026 – Present

- Launched a public, anonymous multiplayer drawing canvas (React, Supabase/Postgres, Vercel). Designed the schema through 26 additive SQL migrations with row-level security, server-side limits, moderation, leaderboards, seasons with archives, and a 90-day session cleanup.
- Built a scheduled GitHub Actions job that renders the canvas into PNG snapshots, incrementally by default and with a full rebuild when already-processed data changes, so clients load one image instead of thousands of rows within free-tier limits. Measured storage per row to plan archiving.
- Building v2 (in progress): a Cloudflare Workers and Durable Objects server for private game rooms, load-tested against a free-tier cost model, with a test suite covering unit, RLS and end-to-end cases.

YouTube Comment Ranker — **GitHub** | **Chrome Web Store** Jul 2026

- Shipped a Chrome extension (live on the Chrome Web Store) that ranks YouTube comments by toxicity using the OpenAI Moderation API, behind a Cloudflare Worker proxy that keeps API keys server-side.
- Added per-IP rate limiting, KV caching keyed by content hash, and batch scoring with exponential backoff to handle upstream limits.

Pathfinding Snake — **GitHub** Mar 2026

- Built a Snake game in Java (Swing) with a breadth-first search autopilot that finds the shortest path on a 30x30 grid, with a fallback move when no path exists.

Technical Skills

Languages	SQL, Python, Java, JavaScript, C, C++, Bash, Scala
Data & Backend	PostgreSQL (RLS, migrations), Supabase, Cloudflare Workers, GitHub Actions, REST API
Tools	Git, React, Node.js, MongoDB
Concepts	Algorithms & Complexity, Client-Server Architecture, TCP/IP
